Global impact of Mitsubishi Electric

Through Mitsubishi Electric's vision, "Changes for the Better" are possible for a brighter future.

Changes for the Better

We bring together the best minds to create the best technologies. At Mitsubishi Electric, we understand that technology is the driving force of change in our lives. By bringing greater comfort to daily life, maximising the efficiency of businesses and keeping things running across society, we integrate technology and innovation to bring changes for the better.

Mitsubishi Electric is involved in many areas including the following

Energy and electric systems

A wide range of power and electrical products from generators to large-scale displays.

Electronic devices

A wide portfolio of cutting-edge semiconductor devices for systems and products.

Home appliance

Dependable consumer products like air conditioners and home entertainment systems.

Information and communication systems

Commercial and consumer-centric equipment, products and systems.

Industrial automation systems

Maximising productivity and efficiency with cutting-edge automation technology.

Features in detail

Robots from € 1.65/hr

Calculated on the basis of their average service life, around 6–7 years in typical applications, Mitsubishi Electric robots have a surprisingly low total cost of ownership at around € 1.65 per hour for both purchasing and operation.

Versatility

Small robots have been used in more than 30,000 applications in widely differing fields since 1978 – and what is more they work around the clock, 24 hours a day, 7 days a week.

Suitable for high-precision component placement with repeatability performance of ± 0.005 mm and a cycle period of just 0.28 s.

Intelligent metal construction and twin-arm structure give the robots particularly high rigidity and precision.

All the gripper hands of the articulated-arm robots conform to the ISO 9409-1 standard.

The high-precision Harmonic Drive transmission helps to provide exceptional repeatability performance.

A very compact design takes up minimum space for applications in cramped quarters.

Simple programming

A powerful range of robots needs an equally powerful and user-friendly programming interface. Mitsubishi Electric's RT Toolbox3 packages are powerful programming and simulation software tools tailored precisely for the needs of your robots.

Network capabilities

Network connections like Ethernet, ProfiBus, ProfiNet, DeviceNet™ and CC-Link make it easy to integrate Mitsubishi Electric robot controllers in to larger systems, providing users with access to every step of the process.

Precision and flexibility

Pharmaceutical industry

Modular control concepts and pharmaceutical industry certification make MELFA robots the ideal partner in the life sciences sector. Integral database connection and an all-embracing control concept facilitate modular and flexible applications in any field where quality and production data have to be backed up in a comprehensible manner.

Food and drink

Increasing hygiene demands, a variety of products and the traceability of production processes are ensured with MELFA robots – now and in the future.

Innovative details and stringent guidelines for MELFA robots guarantee assured quality even in ultra-clean applications.

Automotive industry

Highly accurate and extremely flexible MELFA robots are used whenever every little detail matters – haptic measurement, quality assurance and assembly of complex components. MELFA robots carry out their tasks around the clock and at full speed.

Packaging

High-performance and flexibility are a matter of course for MELFA robots. It goes equally without saying that all Mitsubishi Electric automation components can be incorporated. These include additional axes, PLC controllers and operating terminals. Furthermore, cameras can be connected and robots synchronised with conveyor belts. These functions enable packaging tasks to be carried out reliably, quickly and continuously.

Electronics and mechanical engineering

Mitsubishi Electric provides a wide range of products from parallel-arm robots for the micro assembly of miniature components to fully sealed articulated arm robots. There are no applications which are not suitable for MELFA robots. Whether cleanroom or dirty, oily and dusty environments, the product range always includes the right robot for your application.

Training

Learning from practical experience – a goal which can be achieved in a training environment with the compact, lightweight MELFA robots. Simple programming, simulation options and experienced teachers make entry into the field of robotics easy.

No limits – thanks to standard real-time interfaces and simple programming, MELFA robots provide all sorts of options for using the robots as manipulators, even for complex university research projects.

The technology in detail

Based on these functions, saving of safety equipment and a reduction of safeguarded space is possible which leads to a reduction of cost and space while meeting all safety requirements at the same time.

Sensor-controlled robots with image processing

Mitsubishi Electric's industrial robots can be connected to any object recognition camera system via the Ethernet port or the robot controller's RS232 interface. This enables static and moving parts to be detected with the correct positional information.

The possible uses of sensor-controlled robots in factory automation are manifold. They range from component assembly via quality control and the reworking of workpieces to the location and removal of objects from a conveyor belt.

More safety

The DIN ISO-10218 safety standard is common to all robots and therefore guarantees safe operation in all applications. Mitsubishi Electric's supplementary product range including safety controllers enables the robots to be integrated into a common safety concept. Ready-made example projects make it possible for anyone to put together even complex systems quickly and effectively.

The optional "MELFA SafePlus" safety technology for the F series robot controllers has functions available like reduced safe speed control, safe limited control range and safe torque monitoring, which can be activated via safety inputs. Logic for each safe I/O can be edited and in combination with the position monitoring function a safe system can be constructed without using a Safety PLC.

F-Q series – full PLC functionality in the robot

As robots are never installed on a stand-alone basis, the system must be easy to integrate into its working environment to enable it to communicate with PLC and motion systems as well as operating panels and other systems. Together with the modular robot CPU, the Mitsubishi Electric iQ Platform provides the ideal basis for integrating the full functionality of a PLC into the robot controller – once again demonstrating the company's role as a pioneer in automation technology.

Simple integration into complex applications

Up to eight additional axes can be connected directly to the robot controller with just one cable. Of these, two axes can be used as additional interpolating axes, e.g. as the seventh and eighth robot axis.

The special feature compared with other systems is that all additionally connected axes can be programmed in exactly the same way as the robot, using the same Teach-Box or the standard RT ToolBox3 software. This avoids the additional expense of software, training and programming.

More efficient monitoring and maintenance functions

Direct connection of the company's infrastructure GOT operating terminal via Ethernet opens up a number of monitoring, control and maintenance functions for the robot. The correction of taught points, the backup and restore function, the entry of production data, and the selection and control of processes are just some of the options provided by the Mitsubishi Electric operating terminal in conjunction with MELFA robots.

Open communication for PC connection

The robot controller can be connected to an MES system, for example for easily and quickly changing manufacturing sequences without stopping production.

Furthermore, the robot can be initiated for any kind of movement in real time. Flexible and complex movements, which are generated graphically on the PC, for example, can be realised in this way.

Programming and simulation

Simulation of a Mitsubishi Electric industrial robot directly in an application

High-performance industrial robots also require high-performance software. For this reason, more and more automation engineers are opting for the versatile and convenient Mitsubishi Electric software. All tasks, such as the creation of projects, programming and simulation, are implemented intuitively and mesh perfectly with one another. This results in optimum movement sequences in the shortest possible installation and commissioning time.

Programming

Offline and online programming with simulation

Simulation

3D-CAD import and up to 16 robots can be simulated in one project; additional axes can be connected and positions taught directly in the simulation.

Parameters

Parameter structure for the simple parameterisation of functions; complete overview of all parameters with display of modified values only.

Maintenance

Full backup and restore function and monitoring of service intervals, production runtimes and product cycles.

Monitoring

Display of load currents, position values, variables and variable positions. Monitoring of switching signals, program execution and fault history.

Documentation

Full project documentation with output of modified parameters, program code and positions.

3D-simulation with RT Toolbox3 Pro

The RT Toolbox3 Pro add-in tool for SolidWorks enables a robot in a production system to be simulated on a PC, and converts the workpiece paths into robot position data.

Supplementing the SolidWorks platform by the addition of RT Toolbox3 Pro extends the simulation functions and opens up new simulation possibilities.

- The CAD data of the system can be directly imported
- Grippers can be connected directly to the robot
- Handling of workpieces
- Offline teaching in a 3D environment
- Creation of robot programs
- Collision-checking between robot and system environment

The convenient operating terminal for mobile teaching

The R56TB is a powerful operating panel for carrying out all tasks directly at the robot, from controlling the robot and displaying the loads by means of the input/output display to complete program creation and parameterisation. The comprehensive functions ensure optimum utilisation of the robot system and thus reduce setup times.

The integral USB port enables data to be exchanged conveniently, and complete controller backups can be uploaded and downloaded through a memory stick.

Further service supplies

This product catalogue is designed to give an overview of the extensive range of Mitsubishi Electric MELFA RV-FR, RH-FRH and RP-ADH series. If you cannot find the information you require in this catalogue, there are a number of ways you can get further details on configuration and technical issues, pricing and availability.

For technical issues visit the <https://eu3a.mitsubishielectric.com> website.

Our website provides a simple and fast way of accessing further technical data and up to the minute details on our products and services. Manuals and catalogues are available in several different languages and can be downloaded for free.

For technical, configuration, pricing and availability issues contact our distributors and partners.

Mitsubishi Electric partners and distributors are pleased to answer your technical questions or help with configuration building. For a list of Mitsubishi Electric partners please see the back of this catalogue or alternatively take a look at the "contact us" section of our website.

About this product catalogue

This catalogue is a guide to the range of products available. For detailed configuration rules, system building, installation and configuration the associated product manuals must be read. You must satisfy yourself that any system you design with the products in this catalogue is fit for purpose, meets your requires and conforms to the product configuration rules as defined in the product manuals. Specifications are subject to change without notice. All trademarks acknowledged.

Overview robots

A complete lineup

Large range of robot models makes selection easy

Mitsubishi Electric produces a comprehensive range of robot models to cater to the full spectrum of modern needs. All Mitsubishi Electric robots are powerful, fast and compact – that goes almost without saying.

The product range includes the almost universal articulated-arm robots with 6 degrees of freedom and payloads of 2 kg to 70 kg and SCARA robots with 4 degrees of freedom and payloads of 3 kg to 20 kg for assembly and palletising tasks.

Three special models are the unique high-precision robots with their parallel arm structure for very fast micro handling tasks with payloads of 1 kg to 5 kg as well as the flexible high-speed SCARA robots for ceiling mounting.

Advanced intelligence, safety and integration

The concept of FR robots offers a simple approach to advanced and flexible production to handle all automation needs. This concept is based on 3 key features

- Intelligence: "MELFA Smart Plus" offers greater accuracy and shorter startup times, making installation simpler and more advanced tasks possible.

- Safety: A comprehensive range of safety functions, including position and speed monitoring, allow work to be conducted in cooperation with people

- Integration: MELSEC iQ-R compatible robot controller and the e-F@ctory integrated FA solution offers seamless integration of robots and IT systems.

- RH: horizontal, multiple joint type

Shortened takt times

Improved control performance

Produced the fastest operating performance in its class using high-performance motors and unique driver control technology developed by Mitsubishi Electric.

- Enabled high torque output at high rotational speed, shortening acceleration/deceleration time
- Shortened positioning time for improved device throughput
- Continuous operability improved

Improved tooling performance

Internal routing of hand wiring and signal cable

- Internal routing of cables and air hoses
- No interference with cables around devices
- Reduced risk of wiring disconnection
- Optional models of RV with internal wiring and hoses up to the hand are available (-SH□□)

Flexibility with internal Ethernet cable tools

Internal installation of wiring and piping for connecting to vision sensors enabled.

- Hand: 8 input points/8 output points
- Ethernet cable for the vision sensor
- Additional cables to control vision systems or other sensors

Full use of installation space

Expanded pivotal operating range

- Improved flexibility for robot layout design
- More effective use of access space around the entire perimeter
- Shortened movement distances, enabling takt times to be shortened

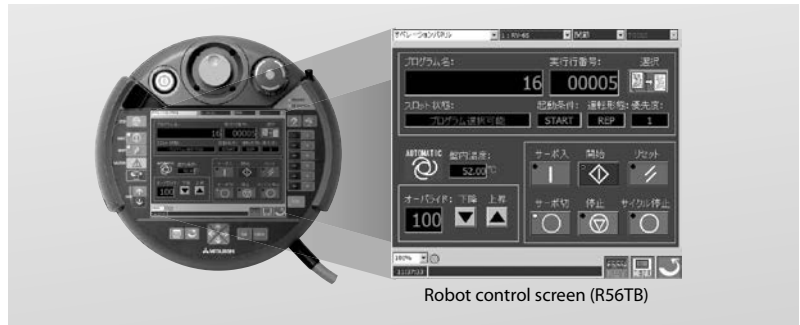

Special functions

Improved user friendliness

Simple automatic operation from the teaching box

- Same functions as on the operating panel of the robot controller
- Monitoring screens can be set up individually to match the needs of user debugging conditions
- Enabled for R32TB and R56TB
- User definition screens for customized operation screens and monitoring

Robot control screen (R56TB)

Enables automatic operation of servo motor on/off, startup and shutdown, reset, program selection, and other operations.

GOT backup/restore functions (Supported on GT14, GT15, GT16, GT21, GT23, GT25 and GT27)

Robot data on the GOT can be backed up to and restored from a CF-/SD-card or USB memory stick. Due to the direct Ethernet connection a PC is not required

- This helps prevent data from being lost due to the empty battery/battery or robot malfunction.
- Data can be saved after periodic maintenance tasks are performed or when unexpected errors occur. Dramatically improves serviceability

Maintenance (log function)

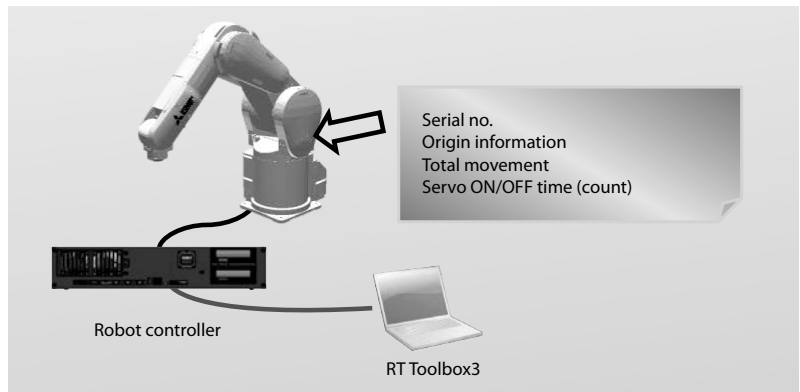

Information before and after errors occur (state changes, I/O, external system variables, etc.) and program run states can automatically be transferred to an FTP server as log data or saved on an SD card. Operation logs can also be downloaded, enabling efficient analysis of error causes.

Easier robot information management

Memory is included in the robot body and used to store robot-specific information. This makes it easy to switch robot controllers.

Information can also be collected without visiting the workplace, simplifying the formulation of maintenance plans.

Improved accuracy

Active gain control

- Optimal motor control tuning settings in real-time based on robot operating position, posture and load conditions
- Improved palletization accuracy
- Improved trajectory accuracy

Simplified tool length setting

Tool settings for the tool coordinate system can be set by attaching the tool and using three to eight of the same teaching points.

- Eliminates errors introduced when the tool was made.
- Higher precision
- Saving time, since measuring the tool is not necessary.

Adaptation to operation

Compliance control

This function reduces the rigidity of the robot arm and tracks external forces.

- Special hands and sensors are unnecessary
- Reduced tooling costs
- Shortened line stop times

Special functions

■ Connection to peripheral devices

Network vision sensor

The robot and camera can be easily simultaneously calibrated through a simple process using vision sensor setting tools.

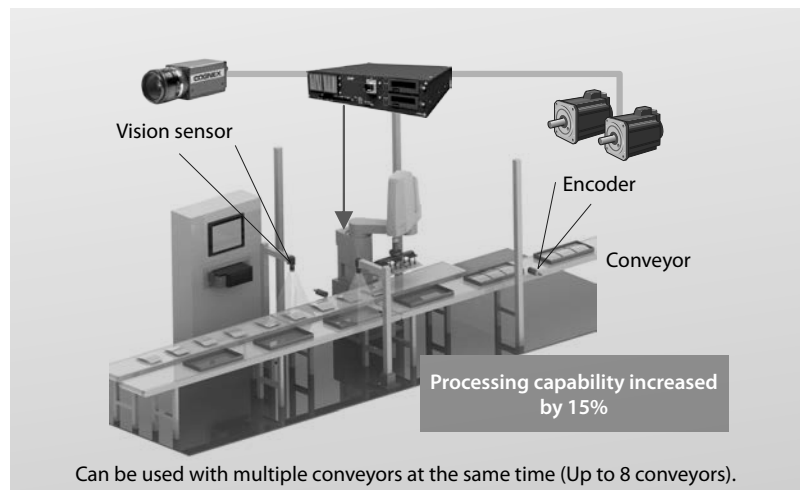

- Simple connection between the robot and camera using Ethernet
- Simple control using vision control commands in the robot programs
- Shortened takt times
- Reduced system costs

Tracking

Transport, alignment, and installation work, etc. can be performed while robots are tracked with the workpiece on the conveyor without stopping the conveyor.

- Higher throughput of components
- Easy programm creation (MELFA BASIC V/VI)
- No need for an additional positioning device
- Prediction of workpiece position for better tact times
- Circular tracking available

Additional axis function

The layout can be set up to include the robot traveling axis and turntable as well as user machines separate from the robot such as loaders and positioning devices.

- Up to 8 additional axes can be controlled by the controller
- No additional motion control hardware necessary
- Plug-and-play compatibility with the MELSERVO MR-J4-B servos
- Two axes can be controlled simultaneously with the robot
- No need of special programming knowledge, because robot software is used.

■ CC-Link IE Field Network Basic function

FR series robot controller supports the slave stations of “CC-Link IE Field Network Basic” as a built-in function

- CC-Link IE Field Network Basic compatible products and Ethernet compatible products can be connected on the same Ethernet communications line
- MELSEC iQ-R/iQ-F/iQ-L series PLC CPU and the MELFA FR series robot controller have built-in Ethernet as standard, so no dedicated option is required
- enabling a highly-flexible and cost-effective system

■ Collision avoidance (R type controllers only)

The robot is stopped, even before collisions can occur. This is possible due to the fast position control, that is implemented in the iQ Platform as a standard feature.

- Robots can operate together in a confined space without interfering with each other
- Reduces the number of recovery man-hours required after a collision
- Already represented in the simulation of the RT Toolbox3
- Can be used in Teach-Mode already

Possible collisions with other robots are avoided.

■ Coordinated control (R type controllers only)

Enables coordinated control between multiple robots through CPU connection between the robots.

- Easy to operate by predefined default function
- Enables transport of lengthy or heavy objects using small-sized robots
- Programming as already known by using standard commands

Enables installation work to be completed while gripper positions between robots are maintained.

Special functions

Intelligent technology

Force sensor

- Monitors the force applied to the robot gripper to handle processes like a human operator
- Keeps the force constant so that the workpiece can be handled without causing damage
- Complex assembly tasks achieved through techniques such as phase matching
- Force log function for checking the quality check

Arm temperature compensation

- Monitors temperature of motor encoders
- Improves positioning accuracy by compensating for thermal expansion in the robot arm

Calibration assistance

- Reduces the time for calibration during start up and improves position accuracy
- Automatically correcting the robot and camera coordinates
- Automatically correcting the robot and workpiece coordinates
- Adjust the robot location relative to other robots

Coordinate control for additional axes

- Allows synchronized operation when a robot is installed on an additional axis (linear axis) to handle large workpieces which exceed robot's working range
- Allows synchronized operation when tracking of the robot with a workpieces on an additional axis (linear axis) is executed

MELFA SafePlus features

“MELFA SafePlus” safety technology for the FR series robot controllers

- Supported Safety functions:
 - STO (Safe Torque Off), SS1 (Safe Stop 1), SS2 (Safe Stop 2), SOS (Safe Operation Stop), SLS (Safely-Limited Speed), SLP (Safely-Limited Position)
- All functions follow the safety standards EN ISO 10218-1 (Industrial robots), EN ISO 13849-1 (Safety of machinery), EN 62061/IEC 61508 (Functional safety) and EN 61800-5-2 (Safety function drive).

Reduced speed control (safe limited speed, SLS)

Function to control the robot speed with safe limited speed to secure operator's safety when signaled via safety input signals. Up to four different zones with different limited speed can be activated. Operator can be interactive while the robot is running in automatic mode, but with safe low speed.

Limited range control (safe limited position, SLP)

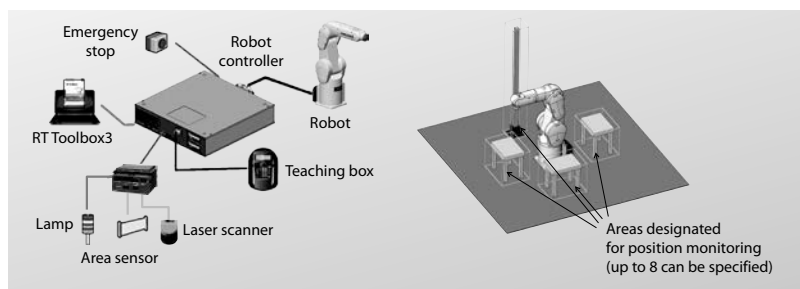

Function to control the robot movement range and to ensure that the robot does not exceed the set limit activated by the safety input signal. This function monitors the robot arm. If the robot or the attached hand exceeds any set plane, the robot will stop immediately.

Independent areas can be defined for different safety situations.

Safety logic editing

Expands the dual safety channels to 8 inputs and 4 outputs. Logic for each safe I/O can be edited and in combination with the position monitoring function a safe system can be constructed without using a Safety PLC.

Collision detection function (Standard feature)

This function detects if the arm collides with an obstacle while teaching or operation, and helps to reduce damaging the robot arm and tools. The detection level can be changed according to the protection targets.

The operation which should follow after the collision detection can be programmed to suit to the application, for example stop immediately and show error or retract and show then the error.

Special functions with GOT terminals and the iQ Platform

Shared memory expansion

Enhanced efficiency of monitoring and maintenance operations onsite using a single GOT (display device) as the Human Machine Interface (HMI).

- Enables the robot to be controlled from the GOT even without a teaching box
- Current robot position data, error information, and other items can be displayed easily on the GOT
- Connection with a single Ethernet cable and direct access to the control unit
- 8192 input an output points can be exchanged via Ethernet connection

Operation panel screen

Jog/hand operation screen

Current position monitor screen

Current value and load factor monitor screen

Maintenance forecast screen

Manual/video display menu

Direct execution function for programmable controllers

Robots can be controlled easily using programmable controller language.

- Control of system operation using an single programmable controller
- Direct changing of system specifications via programmable controller
- Direct handling of troubleshooting
- Simple movement to taught positions by PLC program
- No need to use any robot programs

Industrial robots RV-2FR(B)/RV-2FRL(B)

RV-2FR(B)

The articulated arm robots RV-2FR(B)/RV-2FRL(B)

The compact and light RV-2FR(B)/RV-2FRL(B) can be seamlessly integrated into different automation systems. Flexibility and the wide range of motion permits acting in applications with limited space, like mounting, assembling, palletising, sorting or bonding. Even the basic model is available with a fully equipped standard controller or as PLC robot with integration onto the iQ Platform.

Highlights:

- 2 different arm length with 504 mm and 649 mm
- Only 19/21 kg weight and extremely compact
- Highest flexibility
- Floor, wall and ceiling installation possible
- Position repeatability of ± 0.02 mm

Industrial robots RV-4FRLM

RV-4FRLM

The articulated arm robots RV-4FRLM

The robots of the RV-4 FR series are designed for easy integration into existing work cells or innovative and compact applications. Features such as the direct control over local I/Os allows the robot to interact directly with sensors and actuators, speeding up and simplifying system building. A new innovative design allows a maximum of flexibility, so that the robot can expand his workspace to work faster and more flexible.

Highlights:

- Slim arm design
- IP67 protection
- Internal routed cables and air hoses
- Extended maintenance intervals
- 4 kg rated and maximal payload

Industrial robots RV-7FRM/7FRLM/7FRLLM

RV-7FRLM

The articulated arm robots RV-7FRM/7FRLM/7FRLLM

The RV-7FRM with a nominal and maximum payload of 7 kg sets new benchmark standards for speed, flexibility, ease of integration and simplicity of programming. For an optimum work radius the robot is available in three versions with ranges from 713 mm to 1503 mm. Ethernet, USB, tracking, camera connection and additional axis connections are standard in all MELFA Robot Series.

Highlights:

- Cycle time of only 0.32 s (RV-7FRM) for a 12-inch cycle
- Drastically increased working range for J1 and J4 axis for a maximum working area
- Internal wiring
- IP67 protection
- Workspace radius of up to 1503 mm (RV-7FRLLM)

Industrial robots RV-13FRM/RV-13FRLM/RV-20FRM

RV-20FRM

The articulated arm robots RV-13FRM/RV-13FRLM/RV-20FRM

The high-performance robots RV-13 and RV-20 are specially suited for handling heavy loads. Due to the compact body and slim arm design, the robots can operate in a large work area. The anti-collision function of the iQ Platform models prevents collisions between robots which are working close together.

Highlights:

- internal routing of cables and air hoses through the robot arm
- New gears for quiet, precise positioning and movement
- maximum payload of 20 kg (RV-20FRM)
- Protection rating IP67 standard

High capacity robots RV-35F/RV-50F/RV-70F

These robots with payload from 35 kg up to 70 kg are addressing applications that require higher payloads and longer reaches, including CNC machine tending, large material handling, palletizing and end of line packaging.

Highlights:

- Long reach arm up to 2050 mm for tasks can be spread farther apart and can accommodate larger parts and processes
- Multiple environmental protection ratings – available in IP40 and IP67 protection ratings for various application requirements
- Seamless integration in the Mitsubishi Electric automation world

Industrial robots RH-1FRHR

SCARA robot for overhead installation

With its special compact design and support for overhead installation above the application, the robot RH-1FRHR doesn't take up any valuable space in the work area next to the installation location, enabling even smaller work cell dimensions.

The RH-1FRHR5515 is a high-speed robot dedicated for handling of small parts up to 1 kg. Up to 150 picks/min with conveyor tracking including hand open/close are possible.

Highlights:

- High-speed 4 axis robots for fastest pick and place (cycle times of only 0.28 s)
- Up to 150 picks/min. with conveyor tracking including hand open/close
- Space saving and flexible installation method
- Optional integrated vacuum valve and bellow for highest requirements in pharmaceutical and F&B application

RH-3FRHR

The SCARA robots RH-3FRHR

With its special compact design and support for overhead installation above the application, the robot RH-3FRHR doesn't take up any valuable space in the work area next to the installation location, enabling even smaller work cell dimensions. The robot's perfectly circular cylindrical work space is 150 mm high with a diameter of 700 mm. It can access any point in this space with a repeatability of just ±0.01 mm while manipulating a payload of up to 3 kg.

Highlights:

- Overhead installation for minimum space requirements
- Only 24 kg weight
- Cycle times of only 0.32 s
- High stability due to compact design
- Pneumatic hoses and signal wires are routed inside the robot

Industrial robots RH-FRH

The SCARA robots RH-FRH

SCARA robots are ideal for sorting, palletizing and component installation due to their short cycle time. The robots of the RH-FR series achieve the highest speeds in their class thanks to the new motors developed by Mitsubishi Electric, high arm rigidity, and unique control technology.

The resulting reduced cycle time of only 0.29 seconds for a 12" cycle make for significantly increased productivity and improved continuous operation.

Highlights:

- Connections for pneumatic grippers, Ethernet, USB, tracking functions, camera interface, hand I/O, additional axis controller and an interface for GOT HMIs
- Fully enclosed cabling to end of spindle for protection and safety
- RH-6/12/20FRH has the tried-and-tested protection class IP54 (IP65 optional)

RD-1F800

Delta robots

When items to be picked and placed for packing and assembly are relatively lightweight with simple geometries, then delta robots can offer an effective and reliable high quality, high speed solution. Users can take the advantage of Mitsubishi Electric's highly dynamic servo technology to drive the parallel kinematic axis, and control via Mitsubishi Electric's standard robot controller.

Highlights:

- Lightweight and simple construction for high speed pick-and-place applications.
- Seamless integration in Mitsubishi Electric robot controller
- Fully integrated in RT Toolbox3 inclusive simulation
- Dedicated HD models with IP69K and stainless steel for F&B industry

Controller specifications

CR1DA

Controller CR800

Powerful controller

Every robot system has its own compact, modular robot controller, which contains the CPU and the power electronics for controlling the robot.

Mitsubishi Electric's robot controllers have a particularly slim, compact design. No matter which Mitsubishi robot you use the programming language and options are always the same. You can add special application functions by inserting expansion option cards in the slots in the controllers. Therefore it is possible, to integrate the controller into different types of networks.

All controllers have already implemented functions like Ethernet and USB connection, additional axes control over SSCNET III/H and tracking encoder interface as a standard.

The control unit CR800 also includes the input and output card for the connection of a pneumatic or electric gripper.

Characteristics/Functions	CR800-D	CR800-R	CR1DA

Teaching box for FR series, F series, SD/SQ series and ADH series robots

R56TB

R32TB

R56TB Wall mount

Operation and programming

The R56TB teach panel is a multifunctional control and programming terminal for all Mitsubishi Electric FR series, F series, SD/SQ series and ADH series robots. Its intuitive user interface makes it easy to control robot movements and perform extensive diagnostics and monitoring functions for users of all levels. All safety-critical functions such as robot movements are assigned to keys.

Programming and monitoring functions are accessed and adjusted quickly and easily via the bright 6.5" touchscreen display.

In addition to controlling robot movements the terminal has many other functions: For example, writing programs with a virtual on-screen keyboard and monitoring all system status parameters, inputs and outputs, including those accessed via the network.

A complete backup of the robot can simply be loaded or stored on an USB stick via the R56TB.

Specifications	R56TB	R32TB
Compatibility	All Mitsubishi Electric FR series, F series, SD/SQ series and ADH series robots	
Functions	Operation, programming and monitoring of all robot functions	
Programming and monitoring	Read out information, also during operation; program editing with virtual keyboard; display up to 14 lines of program code; I/O monitoring for up to 256 inputs and 256 outputs; service display with information on maintenance intervals; error display with details of the last 128 alarms	Read out information, also during operation, program editing with T9-Key standard, supervising of I/Os, display of error alarms, right-/left-Hand usage, 36 keys for operation selection
Software	Integrated operating system software with menu-based user interface	
Menu navigation (language)	German, English, French, Italian	English, Japanese
Display	type/dimensions	6.5" TFT display (640x480 pixels)
	technology	Touchscreen with backlight
Interfases	USB, Ethernet for connection to the robot controller	Monochrome LCD graphic display (24 characters x 8 lines)
Connection	Direct connection to the robot controller, cable length 7 m	LCD with backlight
Protection rating	IP65	RS422 for connection to the robot controller

Force sensor

Force sensor set

With the force sensor our RV-FR and RH-FR robots can be controlled to reach pre-set values of reaction force and softness when the robot contacts surrounding objects.

Features

- Function for controlling robots while applying a specified force
- Function for controlling the stiffness of robot appendages
- Function for changing control characteristics while the robot is running

- Function for acquiring force sensor and robot positions while contact made
- Function for display force sensor data and maintaining maximum values
- Function for acquiring force sensor information synchronized to position
- Information as log data and displaying it in graph form
- Allows logging start/stop commands to be specified in robot programs
- Function for transferring acquired log files to the FTP server

Specifications	4F-FS002H-W200	4F-FS002H-W1000
Robots	RV-FR and RH-FR	
Controller	CR800-D/R	
Max. static load (Fx, Fy, Fz / Mx, My, Mz)	200N/4Nm	1000N/30Nm
Set includes:	Force sensor, Force sensor interface unit, Sensor attachment adapter, Adapter cable for internal wiring, 24 V DC Power supply incl. 1 m cable, Serial cable between unit and sensor 5 m, SSCNET III cable 10 m	
Order information	Art. no. 313064	313105

MELFA SafePlus

“MELFA SafePlus” safety technology for the FR series robot controllers

Functions like reduced safe speed control, safe limited control range and safe torque monitoring are the main functions which can be activated via safety inputs, as a

result the FR series robots can be easily integrated in safety systems.

Simple safety logic to control safety I/Os can be programmed in the robot controller without using a dedicated Safety PLC.

Specifications	4F-SF002-01
Robots	RV-FR and RH-FR
Controller	CR800-D/R
Redundant safety In-/Outputs	8 inputs / 4 outputs
Order information	Art. no. 313061

MELFA Smart Plus Card

Advanced intelligent functions are provided by MELFA Smart Plus

Integrated functions for the various sensors and autonomous startup adjustment functions are included:

- Robot mechanism temperature compensation function
- Calibration assistance function
- Coordinated control for additional axes

Specifications	2F-DQ510	2F-DQ511
Robots	RV-FR and RH-FR	
Controller	CR800-D/R	
Number of functions enabled	All functions	1 function
Order information	Art. no. 325728	325729

Internal/external wiring

Internal wiring/piping set for hand

This set consists of hand input cables and hoses that can be routed through the spindle until the end of the arm 2.

A bracket to fix the set on the arm 2 is included. The set can be used with an optional solenoid valve.

Specifications	1F-HS304S-01	1F-HS408S-01	1F-HS604S-01
Robots	RH-1FRHR/RH-3FRH	RH-6FRH	RH-12FRH/20FRH
Stroke	mm	200	350
Length from the shaft end	mm	300	400
Attachment	4 air hoses (Ø 3), 8 hand input cables (0.2 mm ²) 2 power cables (0.3 mm ²)	4 air hoses (Ø 4), 8 hand input cables (0.2 mm ²) 2 power cables (0.3 mm ²)	4 air hoses (Ø 6), 8 hand input cables (0.2 mm ²) 2 power cables (0.3 mm ²)
Remarks	Both ends are free. Eight reducers (Ø 3 to Ø 4) are attached. The robot arm side is connector (HC1, HC2), and one side is free.	Both ends are free. The robot arm side is connector (HC1, HC2), and one side is free.	Both ends are free. The robot arm side is connector (HC1, HC2), and one side is free.
Weight	kg	0.4	
Order information	Art. no. 250468	250469	254396

External wiring/piping box

With this option hand output and input cables and pneumatic hoses can be routed from the back of arm 2 to the spindle end outside the robot casing. Connections for connecting the external hoses and brackets for attaching the cables and hoses are

included. The option can also be used for oil mist and clean room models. A bracket to fix the set on the arm 2 is included. The set can be used with an optional solenoid valve.

Specifications	1F-UT-BOX	1F-UT-BOX-01
Robots	RH-3FRH/6FRH	RH-12FRH/20FRH
Attachment	Eight air hoses (connect to solenoid valve) Installation screws (conical spring washer, plain washer)	
Weight	kg	0.5
Order information	Art. no. 251104	254398

Pulled out from robot arm

Forearm external wiring set/base external wiring set

With these options the hand input signal cables and the communication cables etc. can be led out of the bottom of the forearm and from the side of the base.

Use the recommended pairing in the table to led out the same cables on the arm side and at the base.

Specifications	1F-HB01S-01	1F-HA01S-01
Robots	RV-4FRL/7FR/7FRL/7FRL/13FR/13FRL/20FR	
Part name	Forearm external wiring set	Base external wiring set
Hand input signal cable	8	—
Vision sensor camera cable	1	1
Additional cable	4	4
Recommended pairing	●	●
Order information	Art. no. 257936	257935

Solenoid valve sets

Solenoid gripper control valve sets

This option is used to control the gripper tool installed on the robot arm. The valve set comes with all the components required for installation, including the branch manifold, couplings and dampers.

The valves are fitted with plug-in control cables for quick and easy wiring. The solenoid valve sets are for use with oil-free compressed air.

Interface boards for robot controllers

I/O interface

You can increase the number of I/Os to a maximum of 64 by adding 2D-TZ378 interface modules.

By adding 2A-RZ371 slot-in cards you can increase the number of remote I/Os to 256 (depends on the controller model).

Specifications	2A-RZ371	2D-TZ378
Application	Interface for additional inputs/outputs	
Type	Decentralized I/O box with 32 inputs and 32 outputs	Slot-in card with 32 inputs and 32 outputs
Range of use	All MELFA robots except R series	
Rated load voltage	Inputs: 12 V/24 V; outputs: 12 V/24 V, max. 0.1 A/per output	
Max. no. of usable I/O boxes	7	2
Order information	Art. no. 124658	218862

For I/O connection cables see page 45

Pneumatic hand interface

The 2A-RZ375 interface card is used to operate the robot's pneumatic gripper. It controls the solenoid valve set (see page 41).

Specifications	2A-RZ375
Application	Interface for pneumatic hand (pneumatic valves)
Range of use	All MELFA robots except FR series and F series
Connections	Up to 4 pneumatic valves
Order information	Art. no. 124657

CC-Link interface

The 2D-TZ576 interface makes it possible to integrate the CR□-D robot controller in a CC-Link network.

The CC-Link interface is a high-speed bit (for I/Os) and word (for data registers) network card.

Specifications	2D-TZ576
Application	CC-Link interface
Range of use	All MELFA robots except R series
Communications cable	Shielded 3-core twisted cable
Max. number of I/O points and data registers	126 I/Os/16 data register
Refresh rate	7.2 ms
Communications distances	100 m at 10 Mbps, 150 m at 5 Mbps, 250 m at 2.5 Mbps, 600 m at 0.62 Mbps, 1500 m at 0.15 Mbps
Order information	Art. no. 219063

Profibus interface

These interface cards make it possible to integrate the robot controller in a Profibus network.

Specifications	2D-TZ577
Application	Profibus DP interface
Range of use	All MELFA robots except Q series
Communications cable	Twisted pair cable
Communications distances	1200 m at 9.6/19.2/93.75 Kbps, 1000 m at 187.5 Kbps, 400 m at 500 Kbps, 200 m at 1500 Kbps
Max. no. of communications words	122
Order information	Art. no. 218861

Profinet I/O / EtherNet/IP / CC-Link IE Field interface

These interface cards make it possible to integrate the robot controller in a Profinet I/O, in a Ethernet/IP or in a CC-Link IE Field network.

Specifications	2D-TZ535-PN-SET	2D-TZ535-EIP-SET	2F-DQ535-CCIEF-SET
Application	Profinet I/O	EtherNet/IP	CC-Link IE Field
Range of use	All MELFA robots except R series		
Communications cable	Industrial Ethernet twisted pair cable		
Transmission speed	100 Mbit/s	1 Gbit/s	
Number of I/O data	Max. 256 bytes send and max. 256 bytes receive		
Order information	Art. no. 269546	282409	324560

■ Gripper signal cables

Connection cables

A variety of different cables are available for connecting the control and status monitoring signals of the gripper tools.

When the pneumatic gripper is used you need to monitor the position of the gripper.

You should thus always connect a gripper signal input cable when you use the pneumatic gripper. One end of the cable set is fitted with a plug for the gripper's sensor signals. The other end is without connectors and can be wired as required for your system.

Specifications	1A-GR200-RP	1E-GR355	1F-GR355-02	1F-GR605-01	1S-GR355-02

Tubes, extension cables

■ Hand curl tube

Replacement gripper hoses

These spiral hoses are for use with the pneumatic gripper. They are also suitable for use with clean room robots.

Specifications	1E-ST0404C	1E-ST0408C-300	1N-ST0608C-01	1S-ST0304S
Type	Spiral hose			
Range of use (robot type)	RV-2FR(B)/2FRL(B), RV-4FRL, RV-7FR/7FRL/7FRL	RH-1FRHR, RH-3FRH/6FRH	RH-12FRH/20FRH, RV-13FR/20FR	RH-3FRHR
Application	For double pneumatic gripper	For quadruple pneumatic gripper	For quadruple pneumatic gripper	For double pneumatic gripper
Dimensions	mm 4xØ 4	8xØ 4	8xØ 6	4xØ 3
Order information	Art. no. 47389	270236	269556	238377

■ Machine cables for robots and controllers

Replacement cables for power and signal connections

These machine cables make it possible to decrease/increase the distance between the controller and the robot arm. Versions are available for either flexible and fixed routing of the cables between the controller and the robot arm.

Use the flexible versions for installation of the cables in drag chains and similar configurations. These cables replace the standard cables supplied with the robot.

Specifications	1F-02UCBL-41	1F-10UCBL-41	1F-15UCBL-41	1F-20UCBL-41
Type	Replacement cable for a fixed installation			
Range of use (robot type)	RV-2FR, RV-2FRL, RV-4FRL, RV-7FR/7FRL/7FRL, RV-13FR/13FRL, RV-20FR, RH-3FRHR, RH-6FRH, RH-12FRH, RH-20FRH			
Minimum bending radius	More than 150 mm			
Protection rating	Oil-proof specification sheath			
Length	m 2	10	15	20
Order information	Art. no. 325730	313106	313107	327863

Specifications	1F-10LUCBL-41	1F-15LUCBL-41	1F-20LUCBL-41	1A-05LCBL-1
Type	Replacement cable for a flexible installation in a drag chain			
Range of use (robot type)	RV-2FR, RV-2FRL, RV-4FRL, RV-7FR/7FRL/7FRL, RV-13FR/13FRL, RV-20FR, RH-3FRHR, RH-6FRH, RH-12FRH, RH-20FRH			RP-ADH
Minimum bending radius	More than 100 mm			
Cable bear isovolumetric ration	≤50 %			
Max. movement speed	2000 mm/s			
Guidance of life count	7.5 million times			
Protection rating	Oil-proof specification sheath			
Length	m 10	15	20	5
Order information	Art. no. 313108	313109	327864	167304

■ Connection cables for PCs and inputs/outputs

Connection cables, connectors

The RV-CAB□ cable is for establishing an RS232C serial connection between the robot controller and a personal computer, whereby the MR-J3USBCBL3M can be used for USB connection.

The I/O connection cable is for connecting peripherals to the parallel I/O interface.

One end of the cable is fitted with a connector for the controller's parallel I/O port. The other end is supplied without a connector so that you can connect the appropriate connectors for your equipment.

Specifications	MR-J3USBCBL3M	2A-CBL05	2A-CBL15	2D-CBL05	2D-CBL15	
Type	USB Cable					
Application	USB connection PC-controller	I/O cable for 2A-RZ371		I/O cable for 2D-TZ378		
Range of use	FR series	All MELFA robots except R series				
Design	Mini USB	Plug on one side				
Length	m	3	5	5	15	
Order information	Art. no.	160229	47387	59947	218857	218858

■ Controller protection box (IP54)

The controller protection box for the control unit CR800 prevents the penetration of oil mist or other influences from the operating environment.

The front of the housing is equipped with a mode switch and a connector for the teaching box.

Specifications	CR800-MB
Type	Controller protection box
Application	Controller CR800
Dimensions (WxHxD)	mm 495x250x725
Order information	Art. no. 313062

■ Buffer batteries

Batteries

The backup batteries are used to maintain the encoder and memory power supply. One battery supplies the control unit and up to five batteries are installed in the robot arm.

Specifications	RP-ADH series	RH-FRH series	RV-FR series	Art. no.
MR-BAT6V1	Number	4	4	248692
AGBAT	Number	3	—	4077
Q6BAT	Number	1	—	130376
Battery-Set RH-FR/RV-FR	for RH-FR series and RV-FR series consists of 4 pcs. MR-BAT6V1			327911

MELFA-BASIC programming

Easy-to-Learn MELFA-BASIC Programming language

Mitsubishi Electric robots are controlled with programs written in the powerful MELFA BASIC programming language. In addition to the familiar standard BASIC instructions and constructs like FOR ... NEXT and GOTO, MELFA BASIC also has some extensions required for robots, including additional data types, instructions for movement and gripper control and I/O instructions. The familiarity of standard BASIC makes it easy for beginners to get started with robot programming.

Despite its simplicity and short learning curve, MELFA BASIC is a powerful language that can be used to create very complex robot programs. MELFA BASIC VI allows structured programming with functions and re-use code and ready-made libraries are additionally improving the reusability and readability.

Programming

Robot programs are written with the MELFA BASIC instructions with the help of a PC and the teaching box. The positions

are defined with the teaching box and the actual program is written on the PC.

Programs are written using the RTToolbox3 programming and project managing software for industrial robots. You can find more information about the programming software on the following pages..

4

Programming language

Sample program

The sample program below is for a pick-and-place operation. The input signal M_IN(8) tells the program that there is a workpiece in position P1. When a workpiece is present the input signal is set to 1 and the pick-and-place operation is performed. The workpiece is picked up from position P1 and deposited in position P2. If no workpiece is present the robot remains in the retracted position P_SAFE.

Pick-and-Place Program

1	MVS P_SAFE	Move to safe position
2	Wait M_IN(8) = 1	Wait until input bit 8 is set
3	HOPEN 1	Open gripper 1
4	*PickPlace	Jump-Destination "PickPlace"
5	MVS Pick, -50	Move longitudinally to a position 50 mm from "Pick" relative to the tool Z-direction
6	MVS Pick	Move to position "Pick"
7	HCLOSE 1	Close gripper 1
8	DLY 0.2	Wait for 0.2 s to ensure proper closing of gripper
9	MVS Pick, -50	Move longitudinally to a position 50 mm from "Pick" relative to the tool Z-direction
10	MVS Place, -50	Move longitudinally to a position 50 mm from "Place" relative to the tool Z-direction
11	MVS Place	Move to position "Place"
12	HOPEN 1	Open gripper 1 and deposit workpiece
13	DLY 0.2	Wait for 0.2 s to ensure proper opening of gripper
14	MVS Place, -50	Move longitudinally to a position 50 mm from "Place" relative to the tool Z-direction
15	IF M_IN(8) = 1 THEN GOTO *PickPlace	If another workpiece is present repeat the pick-and-place operation
16	MVS P_SAFE	If no workpiece is present return to safe position and end program
17	END	Program end

RT Toolbox3

RT Toolbox3 is a software for program creation and total engineering support. This PC software supports everything from system startup to debugging, simulation, maintenance and operation. This includes programming and editing, operational checking before robots are installed, measuring process tact time, debugging

during robot startup, monitoring robot operation after startup, and trouble shooting.

- Compatible with Windows® XP, Windows® Vista, Windows® 7, Windows® 8 and Windows® 10.

- Support for all processes, from programming and startup to maintenance
- Enhanced simulation functions
- Advanced maintenance functions
- Extended documentation function

Enhanced RT Toolbox3 visual functions

- Set parameters can be displayed visually to prevent setting errors.
- Display of teaching positions and trajectories of end points.
- Hands can be created and then attached to the robot.
- 3D polygonal models can be imported into the program.(Applicable 3D data file formats: STL, OBJ)

Linked to iQ Works2

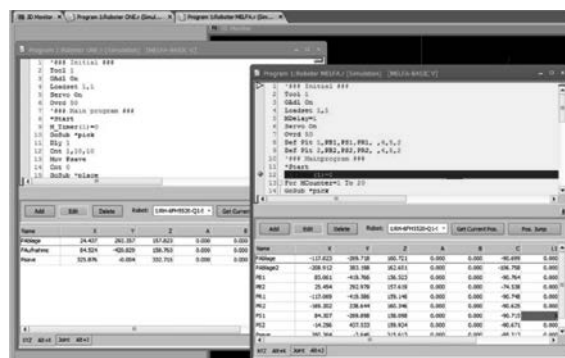

- Integrated Software Suite
Consists of GX Works3, MT Works2, GT Works3, RT Toolbox3 and FR Configurator2, which are programming software for each respective product
- System management software
MELSOFT Navigator is the central system configuration incorporating an easy-to-use, graphical user interface with additional project-sharing features such as system labels and parameters.

Program editing and debugging functions

Creation of programs in MELFA-BASIC IV/V/VI and the Movemaster languages.* Improvement of work operations by a multi-window format and the various editing functions. This is helpful for use in checking operations such as the execution of program steps, setting of breakpoint settings, and other tasks.

* MELFA-BASIC is a programming language that further expands upon and develops the commands needed for robot control. In MELFA-BASIC, the expansion of the command as well as parallel processing or structuring that were difficult to realize in BASIC language can make it possible to operate MELFA easily.

Simulation functions

Offline robot motion and tact time check for designated parts of a program.

3D viewer

Graphical representation of a work along with the dimensions, color and other specified details of the work area to be gripped.

Software

Monitor functions

This is used to monitor program execution status and variables, input signals, etc.)

Maintenance functions

These functions include maintenance forecast, position recovery support, parameter management, etc.

RT Toolbox3 Pro

A 3D robot simulator offers powerful support for system design and preliminary layout.

RT Toolbox3 Pro offers an add-in tool^① for SolidWorks^② used for robot simulation in production systems on PC's converting processing paths of workpieces into robot position data. Adding RT Toolbox3 pro into the SolidWorks platform adds to and expands on the robot simulation functions.

- Loading of part data from peripheral created in SolidWorks® devices and rearrangement
- Installation of hands by CAD files
- Handling of work pieces
- Creating operation data from 3D CAD source data

- Offline teaching in 3D CAD surrounding
- Creation of robot programs (template) Workflow processes can be created using a combination of the offline teaching and CAD link functions and then converted into robot programs. (MELFA-BASIC IV, V, VI format)
- Simulation of robot operations
- Display of the robot movement path in the application/the workspace
- Interference checks between the robot and peripheral devices
- Saving simulated movements to video files (AVI format)

- Measurement of cycle times
- Robot program debugging functions
- Jog function – teaching the robot
- Installation of a travelling axis to verify the operation of the system equipped with this.
- Calibration of point sequence data of CAD coordinates and robot coordinate data

^① An add-in tool is a software program that adds certain functions to application software packages.

^② SolidWorks® is a registered trademark of SolidWorks Corp, (USA).

Automatic robot program creation function

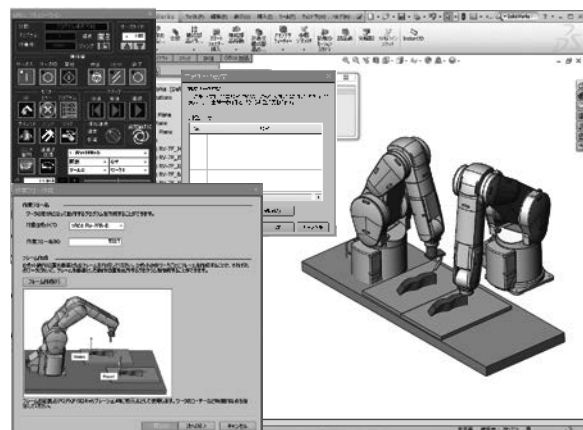

The teaching position data and robot operation programs necessary for operating robots can be generated automatically by simple loading of 3D CAD data^③ for the applicable works into SolidWorks® and then setting of processing conditions and areas using RT Toolbox3 Pro.

^③ Formats that can be loaded into SolidWorks®

Your solution partner

Mitsubishi Electric offers a wide range of automation equipment from PLCs and HMIs to CNC and EDM machines

A name to trust

Since its beginnings in 1870, some 45 companies use the Mitsubishi name, covering a spectrum of finance, commerce and industry.

The Mitsubishi brand name is recognized around the world as a symbol of premium quality.

Mitsubishi Electric Corporation is active in space development, transportation, semi-conductors, energy systems, communications and information processing, audio visual equipment and home electronics, building and energy management and automation systems, and has 237 factories and laboratories worldwide in over 121 countries.

This is why you can rely on Mitsubishi Electric automation solution - because we know first hand about the need for reliable, efficient, easy-to-use automation and control in our own factories.

As one of the world's leading companies with a global turnover of over 4 trillion Yen (over \$40 billion), employing over 130,000 people, Mitsubishi Electric has the resource and the commitment to deliver the ultimate in service and support as well as the best products.

Low voltage: MCCB, MCB, ACB

Medium voltage: VCB, VCC

Power monitoring, energy management

Compact and Modular Controllers

Inverters, Servos and Motors

Visualization: HMIs, Software, MES connectivity

Numerical Control (NC)

Robots: SCARA, Articulated arm

Processing machines: EDM, Lasers, IDS
